

## **GATE – Innovative Personal Doorman Device Created By Google Glass Founders - Breaks Its Indiegogo Campaign Goal**

*Gate smart lock features a motion-activated camera, speaker, call button, and keypad in one piece of hardware, enabling you to manage your door through your mobile phone.*

San Francisco, CA ([PRWEB](#)) November 10, 2016 -- [Gate smart lock](#), created by two of Google Glass founders, raised over 255 percent of its [Indiegogo campaign](#) goal, with seven more days to go. With Gate, you can lock and unlock your door for trusted individuals from anywhere, anytime. Gate features a keypad lock, a motion activated camera, a call button, all on top of your traditional deadbolt.

Since the launch of Indiegogo campaign, Gate has been listed as [a premier Home Security device](#) by Elle Décor, profiled in [Forbes](#), [TechCrunch](#), The Huffington Post, and Yahoo; with CNET calling it “a Swiss Army knife for home security.”

“I was really tired of wasting time just to receive a package or let a repairman into my home,” said Ehsan Saeedi, CEO and co-founder of Gate, “and the existing market’s solutions felt cumbersome and partial in their offerings – having to buy multiple components to install them all over my entryway. So, we, at Gate, set out to create a beautiful piece of hardware that has all of the desired features in one singular unit. Gate intends to make your life easier.”

With Gate, owners are in control. Unlike other smart lock options, there’s no need for guests to download a mobile app to enter a Gate-protected home. Visitors simply receive a text message with a secure access code and owners receive a notification every time their Gate is used. Owners control who has access, when and for how long.

The crowdfunding campaign has secured backing from over 679 individuals and will last through November 15th, with shipping to begin in Q1 2017.
